

Incident Report

Ticket ID: CS-0260

Alert Title: Detection of Suspicious Executable File Download Attempt

Alert Type: Proxy Alert – Executable File Access

Status: Closed

Priority: High

Department: Support

User:

Date Created: March 21, 2025, 6:52 PM

Date Closed: July 21, 2025, 12:31 AM

Detection Source: Proxy Logs (Zscaler)

Email Notification Source:

Summary:

A security alert was triggered by the proxy (Zscaler) for an attempt to **download a suspicious executable file** from a Bitbucket repository. The file in question, Invoice_2024.exe, was identified under the **Malicious Sources/Malnets** category.

Further investigation revealed another related suspicious domain hosted on a free hosting platform, which shares the same destination IP.

Detailed Timeline:

- **March 30, 2025, 6:44 PM** – User attempted to access the following suspicious URL:

-

https://bitbucket.org/riskwca/cscacxxxc/downloads/ads/Invoice_2024.exe

- **Referrer:** <https://www.google.com/search?q=...>
- **HTTP Method:** GET
- **HTTP Status:** 403 (Forbidden)
- **Category:** Malicious Sources/Malnets
- **Proxy Action:** Allowed
- **Server Response:** Blocked the request (403)
- Another suspicious URL associated with the same **destination IP**:

<http://jpgttsspdf.000webhostapp.com/Alibaba.com/Alibaba.com/Alibaba.com>

- **WHOIS Check:**
 - Registrar: MarkMonitor Inc.
 - IP Hosted by Atlassian on Amazon-AES
 - 4% of vendors flagged this domain as **malicious**
 - Categorized as **Phishing** based on site review

🔍 Technical Analysis:

- Although **Bitbucket.org** is a legitimate service, this specific URL was used to **host a potentially malicious file**.
- The executable file (Invoice_2024.exe) is highly suspicious due to:
 - Hosting on a public repository
 - Abnormal naming (used commonly in phishing lures)
 - Category flagged as **Malicious/Malnets**
- The access was **not successful** — the request was rejected by the server with a **403 Forbidden** code.
- However, the initial **action was allowed by the proxy**, which means proactive remediation was necessary.

Impact Analysis:

- **Result:** No malware was downloaded.
- **Scan:** No impact or compromise detected on the user's machine.
- **Redirection Pattern:** Referrer logs suggest possible **malicious redirection chain** starting from a Google search result.

- **Threat Level:** Medium (due to the unsuccessful download but presence of phishing domains and malicious behavior)

Remediation Actions Taken:

Blocked domain jpgttsspdf.000webhostapp.com on:

- a. Zscaler (Web Proxy)
- b. Email Gateway (Proofpoint)

Blocked URL

https://bitbucket.org/riskwca/cscacxxxc/downloads/ads/Invoice_202

in Web Proxy

Performed IOC checks and WHOIS lookup on suspicious domain and IP

Closed incident after ensuring **no** **compromise** and **preventive controls**
applied

Recommendations:

- Continue user awareness programs to warn about suspicious downloads and executable file risks.
- Enhance proxy rules to block .exe files from unknown cloud sources by default.
- Monitor for any future activity involving free hosting platforms and public repositories.
