

Incident Report

Incident Details

- **Incident Title:** VPN Login from Geographically Distant Locations in Short Duration
- **Ticket ID:** CS-0275
- **Status:** Closed
- **Priority:** Normal
- **Department:** Support
- **Source:** Email (alert from monitoring system)
- **Created On:** 25 March 2025, 08:38 AM
- **Closed By:**
- **Close Date:** 29 August 2025, 10:46 PM
- **User Involved:**
- **Help Topic:** None

Alert Summary

- Alert triggered due to **geographically distant login attempts** observed for user within a short timeframe.
- Two sessions were established:
 - **India (ACT ISP, Vijayawada)** → 11 device (Corporate Endpoint)
 - **Japan (CDN77 Tokyo)** → Android device (personal mobile)

Log Analysis

VPN Session Logs

Timestamp	Source IP	Destination IP	User	Hostname	Device Type	Session Status	Message
-----------	-----------	----------------	------	----------	-------------	----------------	---------

25 Mar 2025 10:34		sum er.d ewa n	774	Win dow s 11	Activ e	Session started from device 'iOS' (Corporate VPN, FullAccess)
25 Mar 2025 10:45	2	sum er.d ewa n	Sams ung- G991 B	And roid OS	Activ e	Session started from device 'Android OS' (Corporate VPN, FullAccess)

Authentication Events

- Both sessions successfully passed authentication and MFA challenge (OTP).
- No failed login attempts observed.
- Both sessions ended due to **idle timeout (30 minutes inactivity)**.

Source IP Analysis

Known IP (User's Usual Location):

-
- ISP: ACT-Guntur (India)
- City: Vijayawada, Andhra Pradesh
- Hostname: broadband.actcorp.in

New IP (Alert Trigger):

-
- ISP: CDN77 (Tokyo, Japan)
- Usage Type: Content Delivery Network (commonly used by third-party VPN providers)
- Hostname: 181461758.tyo.cdn77.com

Assessment:

The Tokyo IP is associated with a CDN/VPN service and not a direct residential ISP.

Investigation & IOC Scoping

- IOC search for [REDACTED] across other log sources: **No suspicious activity detected.**
- No lateral movement, privilege escalation, or abnormal proxy/email activity identified.

Actions Taken

User Verification:

- a. Contacted user [REDACTED] to confirm login activity.
- b. User confirmed using **a personal mobile device** with a **third-party VPN application**, causing login to appear from Tokyo.

Awareness & Security Guidance:

- a. Educated user on risks of connecting corporate VPN via personal VPN applications.
- b. Recommended using only approved VPN clients without tunneling traffic through external VPN services.

Conclusion

- **Classification:** False Positive (Geo-velocity alert due to third-party VPN usage)
- **Root Cause:** User accessed Corporate VPN via personal mobile device using CDN77 VPN service.
- **Impact:** None (legitimate user activity, no compromise detected).
- **Resolution:** Verified and closed after user confirmation.
- **Ticket Status:** Closed
